Materials & Shape

Materials

A wide choice of materials is available, depending on the product line. Materials include e.g. stainless steel, aluminium, glass, veneered wood and ethronite. Many more can be added.

Most of our customers however by far prefer aluminium for its durability and strong design qualities.

Shapes

Signs do not have to be rectangular. Their shape could instead reflect the shape or characteristics of a company's logo or image.

Artwork can strongly emphasize the visual message expressed through the sign.
