

## Facility View

The best and fastest way to a high quality and well designed digital signage system.

The best and fastest way to a high quality and well designed digital signage system.

Facility View is a digital signage system for meeting rooms and offices, so people can see what meeting/activity is taking place and what meetings/activities are scheduled for the day.

Facility View is a new digital signage concept developed in partnership with Add-On Products, an industry leader in Microsoft add-ons who holds many product awards and is a Microsoft Gold Partner.

The concept consists of

1. Facility View module software that links Microsoft Outlook information to screens
2. Modulex's well designed and high quality 10" screens

Installation of this system is very simple - we dare to call it Plug n' View - and competitively priced compared to other digital solutions.

Support and maintenance program is developed for the system and is mandatory. It is possible to order a remote setup if required.

Facility View - digital signage in high quality and design.  
Simple, reliable and competitively priced.

Meetings are a daily necessity for many businesses and being disturbed during important meetings with business partners and colleagues can be frustrating. Facility View eliminates those inconvenient incidents by allowing users to see which meeting facilities are available via a digital sign. No more "but I thought it was available" situations.

With Facility View, users are also able to use available meeting spaces on an ad hoc basis without going through Outlook first to check availability.

If a client requires additional assistance to integrate or customize the solution or additional functionality when booking resources, please contact Add-On products +45 7944 7000.
