

Modulex Hardware Solution

Quality hardware in elegant design

Our philosophy

An elegant design with a high quality screen sends the right message to our clients and visitors.

As a new feature you will now be able to use all software applications with our Modulex hardware.

Our product:

- Engineered to run 24/7, but minimum 4 hours powersafe is recommended for lifetime and environmental reasons.
- Elegant design with a front panel that can be any of 3,000 colours and contain any static texting
- 2 years guarantee and maintenance agreement (optional)
- Software option provided & supported by the leading FMS software houses

Modulex has over 10 years of experience in digital signage and more than 40 years of experience in architectural signage.

Modulex was one of the very first architectural signage providers to design a complete digital signage system. Our choice of components may seem of a Swiss mentality but this is what it takes to supply a lasting solution. We use the newest DID technology (Dedicated Information Display) specially developed and designed for digital signage to work under often quite demanding 24/7 conditions. Our displays are complete units with an integrated IPC (Industrial PC) that makes installation and handling very easy. The multimedia controller is integrated and thus ensures a simple and safe installation. Our solutions are obviously both UL and CE approved.

Our solutions come in three sizes 32", 40" or 46"* and can be installed on the wall both in landscape and portrait mode. The unique design enables the panel to be mounted directly onto the wall or to be recessed into the wall. A specially developed sleeve is used when the panel is integrated into the wall to ensure that all safety regulations are observed.

In addition we also offer an elegantly designed monolith. If the sleeve is used the panel can also be built into custom stands or monoliths. The colour of the front panel for both the displays and for the monolith can be delivered in any colour.

All specifications and installation guides can be downloaded from our web site.

If you need a high quality hardware solution in an elegant design for your software or you need a full digital solution for your project, Modulex, as an experienced and competent player * in digital signage, will look forward to be your trusted partner.

Our 10" PNG, 15" PNG and 15" MM displays are of course still available, but only for integration with Ariadne software.
